UCC PANEL

شركة المتحدة لأعمال الكلادينج و الزجاج التجارية
UNITED CLADDING AND GLASS WORKS COMPANY

STRUCTURAL COMPOSITION

Specifications

- Aluminium: 0.3mm, 0.4mm, 0.5mm.
- Thickness: 3mm, 4mm, 6mm.
- Width: 1000mm, 1250mm, 1500mm.
- Maximum Length: < 6000mm.

Applications

- Wall curtain, Cladding and Facade.
- Roof edges and Parapet Wall.
- Dado, Separation Wall and Partition.
- Advertising Plate, Showroom, Furniture and Shop Front Signing.
- Column Covers and Beam Wraps.

Fire Test Standards

ASTM E84, ASTM D1929, EN 13501-1, NFPA 285

Certifications

Intertek, Thomas Bell Wright, Dubai Central Laboratory

Approved By

UAQ Civil Defence, Dubai Civil Defence, Abu Dhabi Civil Defence

Benefits & Features

Greater Impact Resistance

The core comprises a viscoelastic high molecular resin material preventing cracking or breaking, yet comes with exceptional high stiffness and impact resistance properties.

Weather Durability

Panels are coated with Fluorocarbon (PVDF) resin that is able to withstand extreme weather conditions and minimizes the possibility of acid alkali and salt-spray corrosion. Unaffected by rapid changes in temperature and long term exposure to ultraviolet rays, providing up to 25 years without signs of colour fading.

Easy to maintain and clean

Having resilient coating properties, the panels perform well in extreme atmospheric conditions - polluted or not. It is however imperative panels are maintained in strict accordance with EPM's O&M cleaning guidelines and only neutral cleaners are applied to the surface.

Insulating and Sound Proofing

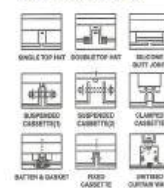

ACP maximizes the effect of insulation and sound proofing as the composition of the panel does not allow heat or sound to penetrate through the material due to its core, unlike steel, solid aluminium, tiles and other similar materials.

Smooth coating and Various color

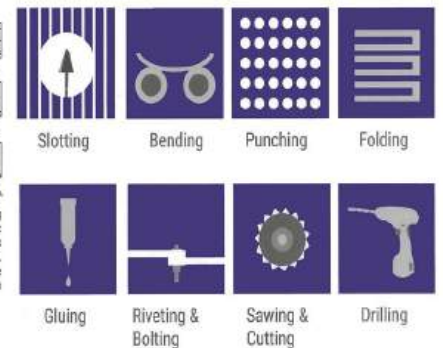

One of the most unique physical properties of ACP is that it is flat, smooth and has an even surface. Creating a building's aesthetic look and feel is achieved from EPM's various and distinctive colour range that can be customized to suit requirements.

Economical and Ease of Installation

EPM panels are an alternative cladding system offering respectable acoustic and U-value features at reduced costs compared to other facade solutions. Replacement costs are also more competitive considering the systems design.
